

Small Shop Helper Program: User Guide

Program Purpose

This program helps shop staff calculate a customer's total purchase and will automatically apply a discount if applicable using product data stored in a spreadsheet.

How to Run:

1. **IMPORTANT!** Make sure products.csv is in the same folder as the program
2. Run the Python file
3. Follow the on-screen menu

Menu Options:

- **p** To view product list (Use this if you are unsure of what product ID to use)
- **i** To view inventory (Use this to view how much product stock is left)
- **ENTER** To add an item by Product ID
- **q** To print invoice and exit

Adding Items:

1. Press ENTER
2. Enter a Product ID
3. Item will be added to the cart
4. Repeat until finished

Checkout:

1. Press **q**
2. Invoice is printed
3. Discount is applied automatically if subtotal $\geq$ £30

Maintenance Notes

DO NOT change or alter the file name of products.csv

products.csv MUST remain in the same folder as the program

To update products or prices, edit products.csv

DO NOT change column names in products.csv (Product_ID, Cost, etc.)

Future changes should be tested before use
